# THE MAIDA DEVELOPMENT COMPANY

Since 1947 the Maida Development Company has been a leading manufacturer and supplier of high quality components for the electronic industry. Maida currently has four full product lines, consisting of zinc oxide varistors, ceramic disk capacitors, NTC thermistors, and X2Y™ EMI devices. From its founding in 1947, by Francis X. Maida, the corporate offices for Maida are located in Hampton, Virginia.

Maida products are shipped and distributed worldwide to OEMs and end-users that require exceptional service and delivery. Distribution is achieved with an international team of trained, experienced sales representatives and distributors strategically located worldwide. Maida also manages customer accounts and ships products directly to customers through its Corporate and China offices.

Component products manufactured by Maida cover a wide range of uses and industries. Maida's zinc oxide varistors are used in many applications that require protection against transients induced by lightning struck power lines. They also provide protection for suppression of transients caused by switching inductive loads from transformers, relays and coils. Common applications include surge protective devices (SPD's), ground fault circuit interrupters, arc-fault circuit interrupters, power supplies, telecommunication equipment, computer and computer-related products, motor control systems, cable TV systems, portable electronics devices and AC smoke detectors, plus many special applications.

The Maida manufactured products include a complete line of radial-leaded ceramic zinc oxide varistors along with a line of surface mount varistors. Maida also manufactures a complete line of high voltage ceramic disc capacitors, complemented by a full selection of safety capacitors. NTC ceramic thermistors used for in-rush current limiting and temperature sensing applications are also parts of the product line-up at Maida. Custom design and fabrication of components for specific customer requirements are also available from Maida.

Maida products are component-recognized in the United States as well as internationally by organizations such as UL, CSA, and VDE.

Maida products have a long heritage of proven high quality performance and reliability. They even worked their way to the moon and back during the Apollo Space Program. The Maida success story in part has resulted from a continuous dynamic program of research and development for improving both products and manufacturing processes to meet customer needs. Dedicated employees, management with a customer service attitude, sound competitive marketing, and state-of-the art products sum up the Maida story.

## Terminology & General Specifications

TECHNICAL TERM	DESCRIPTION	SPECIFICATION
Operating Temperature	Operating Temperature Range without Derating.	-40°C to +85°C
Storage Temperature	Storage Temperature Range without Voltage Applied.	-50°C to +125°C
Current / Energy Derating	Derating of maximum Values when Operated above +85°C	-2.5% / °C
Varistor Voltage Temperature Coefficient	$\frac{Vv \text{ at } 85^\circ\text{C} - Vv \text{ at } 25^\circ\text{C}}{Vv \text{ at } 25^\circ\text{C}} \times \frac{1}{60^\circ\text{C}} \times 100$ <p>Where Vv is varistor voltage at 1mADC</p>	-0.05% / °C
Insulation Resistance	Minimum resistance between shorted terminals and varistor surface.	10,000M Ω minimum
HiPot Encapsulation	Minimum voltage applied for one minute between shorted terminals and varistor surface.	2,500 VDC
Impulse Response Time	Time lag between application of surge and varistor's "turn-on" conduction state.	< 50 nanoseconds
DC Leakage Current	Maximum current with rated DC voltage applied.	200uA maximum
Safety Agency Recognitions	UL1449 cUL CSA VDE	See Specification Sheet
Applied Voltage - AC	Maximum continuous sinusoidal RMS voltage which may be applied (MCOV).	See Specification Sheet
Applied Voltage - DC	Maximum continuous DC voltage which may be applied.	See Specification Sheet
Transient Energy (Joules)	The maximum energy absorbed with a varistor voltage change of less than ± 10% when one impulse of an 8x20us current waveform is applied.	See Specification Sheet
Transient Peak Current	The maximum current with a varistor voltage change of less than ± 10% when one impulse of an 8x20us current waveform is applied.	See Specification Sheet
Varistor Voltage	Voltage across the varistor measured at 1mADC	See Specification Sheet
Maximum Clamping Voltage	Peak voltage across the varistor with a specific peak impulse current applied (8x20us).	See Specification Sheet
Capacitance	Typical value measured at 1Vrms and a test frequency of 1KHz.	See Specification Sheet

### LEAD CODES

The Maida Development Company prides itself on its ability to manufacture wire leaded devices to meet almost every request of its customers. The following table depicts common varieties of leads that are presently supplied. It should be noted that the dimensions (such as the X, Z, height, lead length, epoxy "pant leg", wire diameter, etc.) can be modified on any of the items shown to meet almost any request. Maida is also capable of supplying the various lead forms in either right-hand or left-hand configurations.

For any inquiries regarding specific lead forms please contact us.

NOTE: The images shown depict a round varistor only. However, any lead configuration can be obtained on either round or square varistors.

### TAPE & REEL

The Maida Development Company zinc oxide varistors are available in Bulk, Tape & Reel, or Ammo Pack packaging formats. All Tape & Reel and Ammo Pack part numbers are designated by suffixing the Maida style number with a T followed by a 1-2 digit alphanumeric code. The codes are generally given to indicate whether the packaging is either Ammo Pack or Tape & Reel, the typical lead spacing of the varistor, the lead style, the wire gauge (or wire diameter), and the taping pitch.

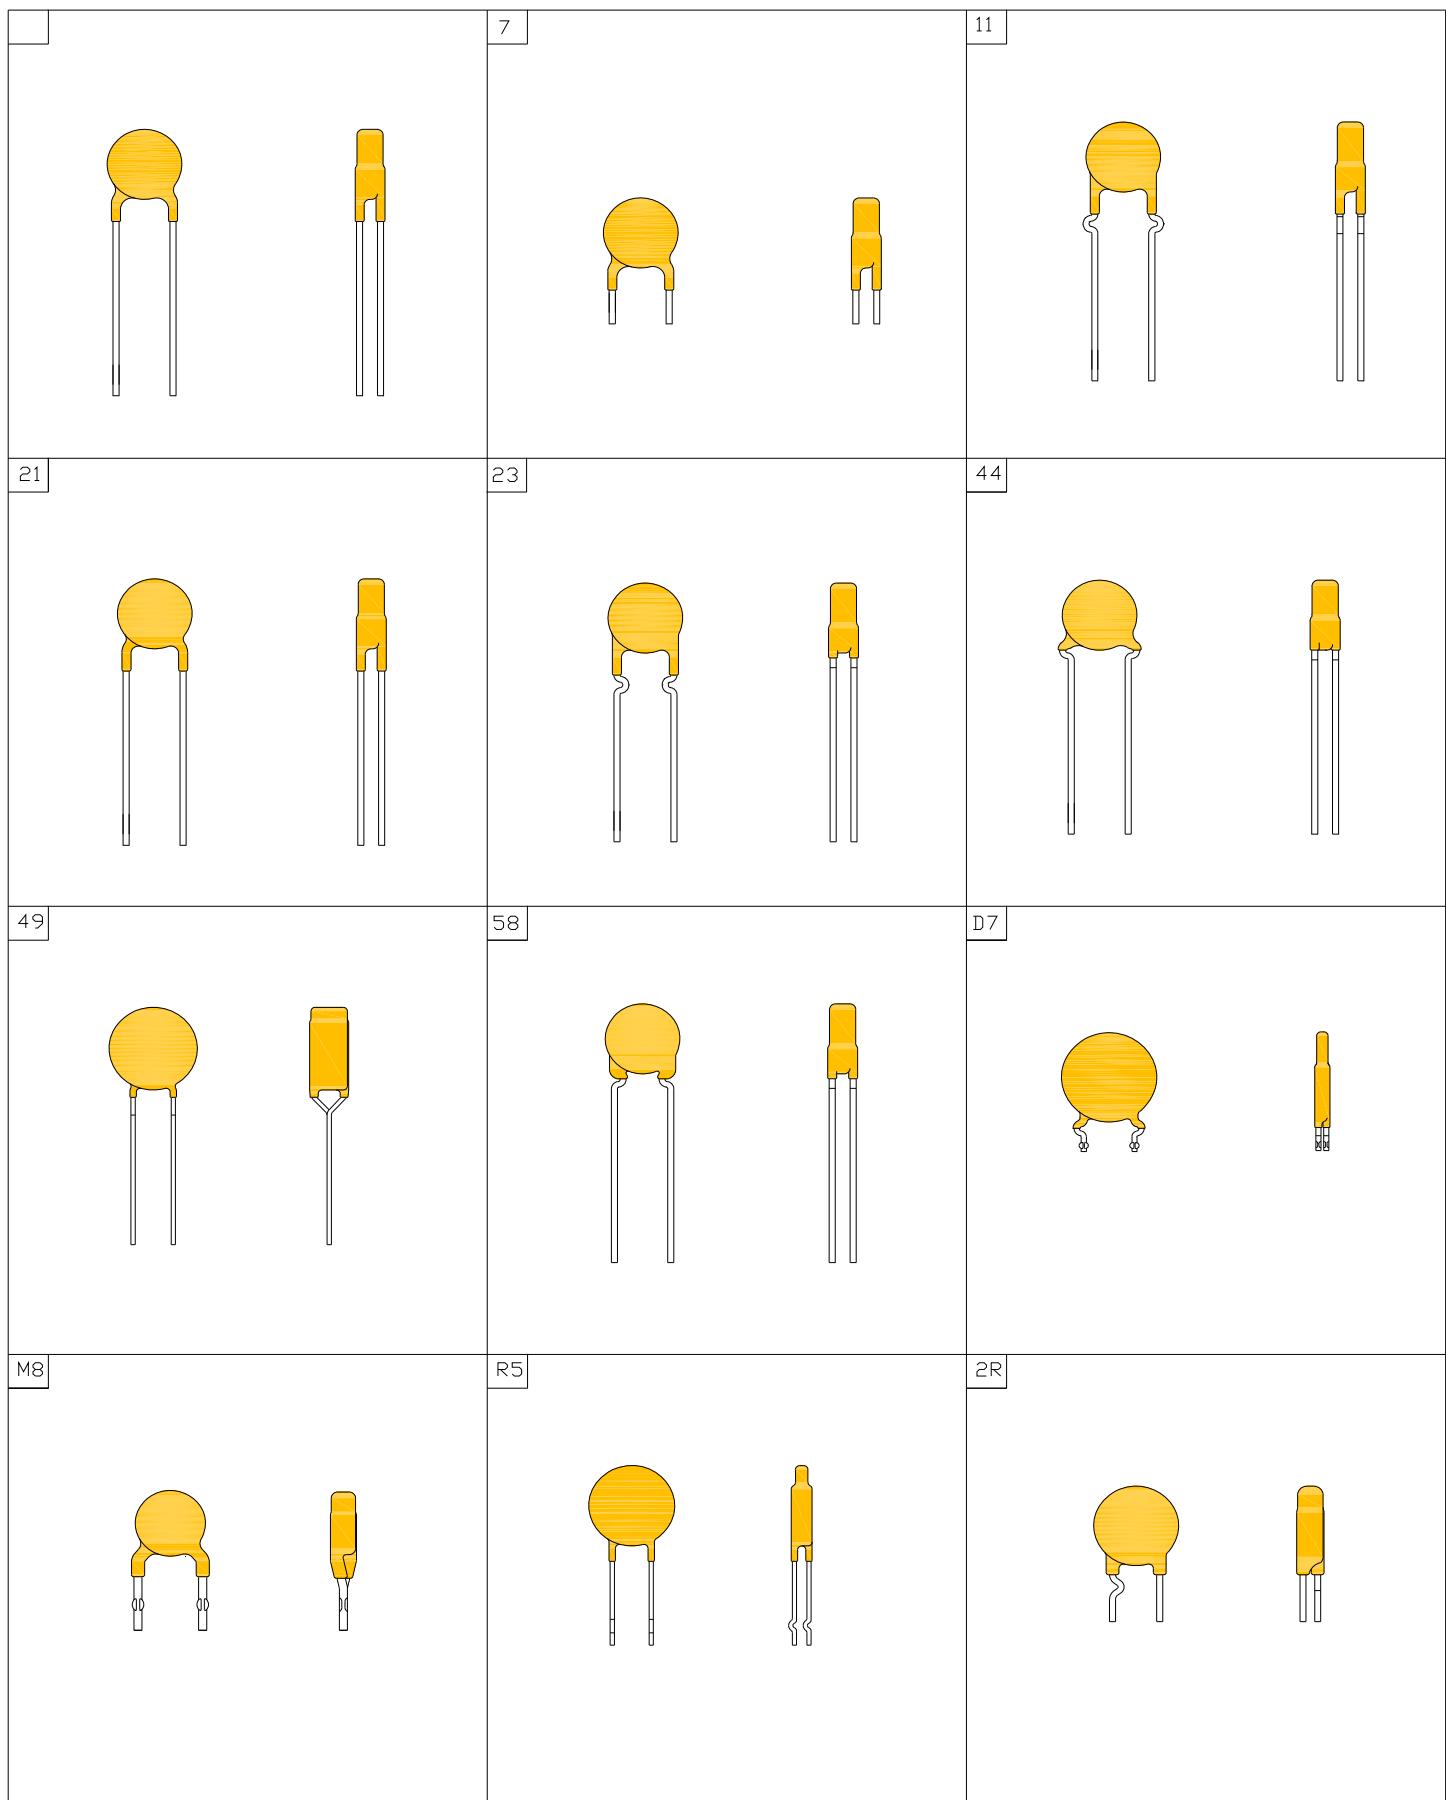

Generally, through-hole varistors with a lead spacing of 0.394", or less, and a nominal disc diameter of 20mm, or less, can be taped. Larger diameters and/or lead spacing's may be offered taped; however customers should contact us for confirmation.

All SMV Series, Encapsulated MOV Series, and MLV Series are provided Tape & Reel. For bulk packaging please contact us.

Maida's taping specifications comply with the requirements of the EIA taping standard. Configurations are available to meet almost any request.

Detailed drawings for all taping codes are available upon request.

# STANDARD SERIES

## INTRODUCTION

The Standard Series is our broadest and most comprehensive line of radial-leaded varistors. These components consist of wire leads and have nominal disk diameters from 3mm to 25mm. They are available with maximum continuous operating voltages (MCOV) ranging from 11VAC to 1000VAC (up to 1500VAC upon request).

The Standard Series is designed to handle most low and medium power applications requiring through-hole components. Most sizes are available in Tape and Reel and ammo pack.

For a complete listing of Maida Development Company's IEC ANNEX Q certified devices please see Appendix B of this catalog.

## STYLE DESIGNATION

The Maida Style Number is the typical means to identify our components when ordered. The style number identifies several parameters that are important for the characteristics of the device. An alternative ordering method, if known, is by our Item Number.

The following example is the standard part numbering system when ordering our Standard Series components by the Maida Style Number:

- D 65 21 ZOV 131 RA 20
- Coating Designation** \_\_\_\_\_  
D – Standard Epoxy Coating  
P – Phenolic Coating  
Neither – Denote no conformal coating.
  - Nominal Disk Diameter** \_\_\_\_\_  
56 – 3mm                  69 – 14mm  
58 – 5mm                  79 – 15mm  
73 – 7mm                  64 – 16mm  
68 – 8mm                  63 – 18mm  
61 – 10mm                65 – 20mm  
71 – 11mm                66 – 25mm  
62 – 12mm
  - Lead Configuration** \_\_\_\_\_  
(Refer to lead codes)
  - Material Identifier** \_\_\_\_\_  
Zinc Oxide Varistor
  - AC Voltage Rating** \_\_\_\_\_  
Two significant figures plus number of zeroes that follow, i.e. 131 is 130 VAC
  - Special Instructions**, RA is standard \_\_\_\_\_
  - Rating Code**, up to four numbers \_\_\_\_\_

## STANDARD MARKING

Minimum marking shall consist of an abbreviated style designation and, when space is available, the manufacturer's initials or company logo.

For example:

MDC

Z131

20UL

Where:

MDC - Company Initials

Z - Zinc Oxide Varistor

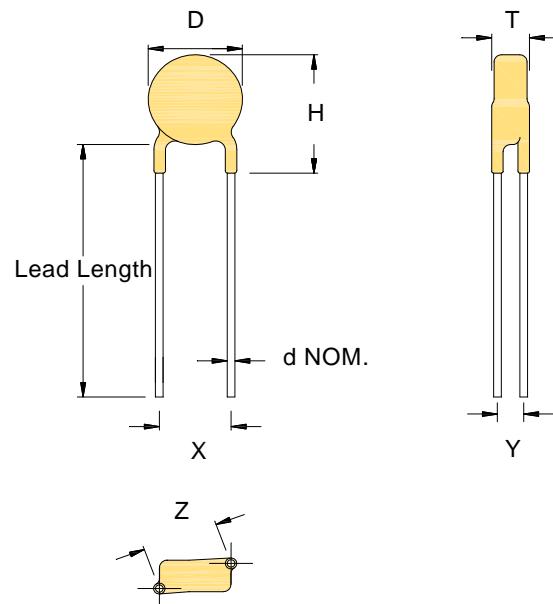

131 - AC Voltage rating (130VAC)

20 - Rating code

UL - UL recognition, if applicable

A manufacturing date code and/or special markings are available upon request.

Other safety agency designations are included where applicable.

#### NOTES:

Appendix A lists the single-pulse peak current and energy ratings on file with the Safety Agencies.

Maximum transient rating specified in this table are valid. They may differ from those shown in Appendix A.

A = UL1449      D = VDE

B = cUL      E =

C = CSA      F =

NOTES:

Appendix A lists the single-pulse peak current and energy ratings on file with the Safety Agencies.

Maximum transient rating specified in this table are valid. They may differ from those shown in Appendix A.

A = UL1449      D = VDE

B = cUL      E =

C = CSA      F =

#### NOTES:

Appendix A lists the single-pulse peak current and energy ratings on file with the Safety Agencies.

Maximum transient rating specified in this table are valid. They may differ from those shown in Appendix A.

A = UL1449      D = VDE

B = cUL      E =

C = CSA      F =

NOTES:

Appendix A lists the single-pulse peak current and energy ratings on file with the Safety Agencies.

Maximum transient rating specified in this table are valid. They may differ from those shown in Appendix A.

A = UL1449      D = VDE

B = cUL      E =

C = CSA      F =

#### NOTES:

Appendix A lists the single-pulse peak current and energy ratings on file with the Safety Agencies.

Maximum transient rating specified in this table are valid. They may differ from those shown in Appendix A.

A = UL1449

D = VDE

B = cUL

E =

C = CSA

F =

## PEAK CURRENT PER PULSE vs. PULSE DURATION

## INTRODUCTION

The HC Series, or High Current Series, is our specialized line of round and square disc, radial-leaded varistors. These components consist of wire leads and have nominal disk diameters from 8mm to 25mm. They are available with maximum continuous operating voltages (MCOV) ranging from 130VAC to 550VAC.

The HC Series is designed for pulse repetition and/or higher surge current environments including requirements by many safety agency standards, such as UL943. Most sizes are available in Tape and Reel and ammo pack.

## STYLE DESIGNATION

The Maida Style Number is the typical means to identify our components when ordered. The style number identifies several parameters that are important for the characteristics of the device. An alternative ordering method, if known, is by our Item Number.

The following example is the standard part numbering system when ordering our HC Series components by the Maida Style Number:

- |  |   |
|--|---|

## STANDARD MARKING

Minimum marking shall consist of an abbreviated style designation and, when space is available, the manufacturer's initials or company logo.

### Example 1: Example 2:

MDC                    MDC  
20HC                R65  
130V                HZ131

Where:

MDC - Company Initials  
20 - Disc Diameter  
HC - High Current  
130V - AC Voltage rating (130VAC)

MDC - Company Initials

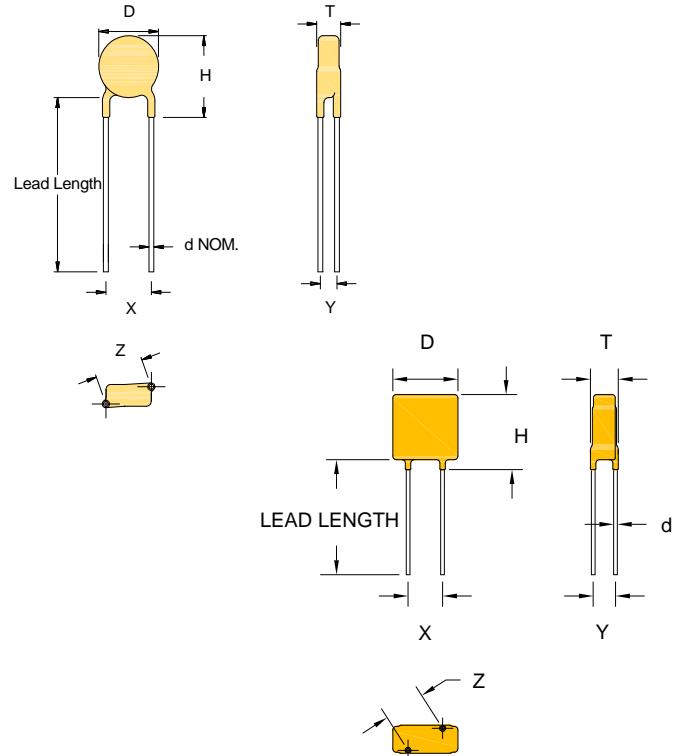

R65 - Square Disc Diameter

HZ - High Current

131 - AC Voltage rating (130VAC)

A manufacturing date code and/or special markings are available upon request.

Other safety agency designations are included where applicable.

#### NOTES:

Appendix A lists the single-pulse peak current and energy ratings on file with the Safety Agencies.

Maximum transient rating specified in this table are valid. They may differ from those shown in Appendix A.

A = UL1449      D = VDE

B = cUL      E =

C = CSA      F =

#### NOTES:

Appendix A lists the single-pulse peak current and energy ratings on file with the Safety Agencies.

Maximum transient rating specified in this table are valid. They may differ from those shown in Appendix A.

A = UL1449      D = VDE

B = cUL      E =

C = CSA      F =

#### NOTES:

Appendix A lists the single-pulse peak current and energy ratings on file with the Safety Agencies.

Maximum transient rating specified in this table are valid. They may differ from those shown in Appendix A.

A = UL1449

D = VDE

B = cUL

E =

C = CSA

F =

# LOW PROFILE SERIES

## INTRODUCTION

The Low Profile Series complements our Standard Series as our square disc, radial-leaded varistors. These components consist of wire leads and have nominal disk diameters from 12mm to 25mm. They are available with maximum continuous operating voltages (MCOV) ranging from 130VAC to 1000VAC. The Low Profile Series are designed to fit into spaces that Standard Series electrically equivalents are unable to fit. Most sizes are available in Tape and Reel and ammo pack.

### STYLE DESIGNATION

The Maida Style Number is the typical means to identify our components when ordered. The style number identifies several parameters that are important for the characteristics of the device. An alternative ordering method, if known, is by our Item Number.

The following example is the standard part numbering system when ordering our Low Profile Series components by the Maida Style Number:

- R 65 21 ZOV 131 RA 150
- Coating Designation** \_\_\_\_\_  
R – Standard Epoxy Coating  
S – Standard Epoxy Coating, 25mm  
PR/PS – Square Disc Phenolic Coating  
Neither – Denote no conformal coating.
  - Nominal Disk Diameter** \_\_\_\_\_  
R69 – 12mm Square  
R65 – 17mm Square  
R66 – 22mm Square  
S66 – 25mm Square
  - Lead Configuration** \_\_\_\_\_ (Refer to lead codes)
  - Material Identifier** \_\_\_\_\_ Zinc Oxide Varistor
  - AC Voltage Rating** \_\_\_\_\_ Two significant figures plus number of zeroes that follow, i.e. 131 is 130 VAC
  - Special Instructions**, RA is standard \_\_\_\_\_
  - Rating Code**, up to four numbers \_\_\_\_\_

### STANDARD MARKING

Minimum marking shall consist of an abbreviated style designation and, when space is available, the manufacturer's initials or company logo.

Example:

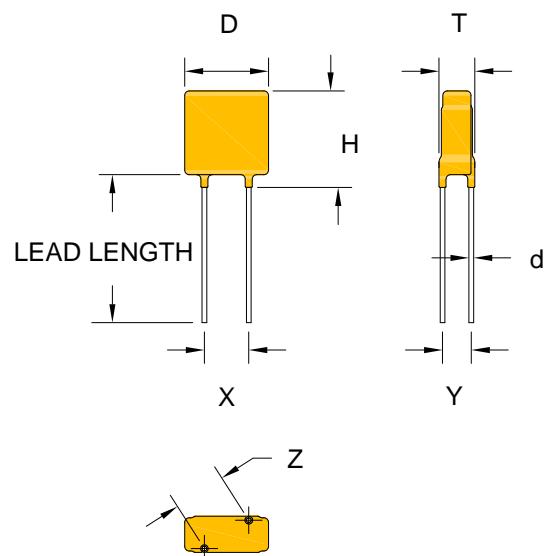

MDC  
R65  
131UL

Where:

MDC - Company Initials  
R65 – Square Disc Diameter  
131 – AC Voltage rating (130VAC)  
UL - UL recognition, if applicable

A manufacturing date code and/or special markings are available upon request.

Other safety agency designations are included where applicable.

# LOW PROFILE SERIES

#### NOTES:

Appendix A lists the single-pulse peak current and energy ratings on file with the Safety Agencies.

Maximum transient rating specified in this table are valid. They may differ from those shown in Appendix A.

A = UL1449

D = VDE

B = cUL

E =

C = CSA

F =

### NOTES:

Appendix A lists the single-pulse peak current and energy ratings on file with the Safety Agencies.

Maximum transient rating specified in this table are valid. They may differ from those shown in Appendix A.

A = UL1449

D = VDE

B = cUL

E =

C = CSA

F =

# LOW PROFILE SERIES - TYPICAL VOLTAGE-CURRENT CURVES

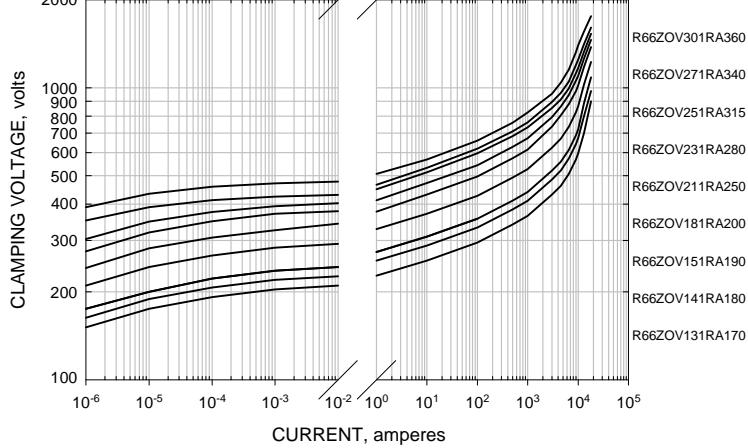

R69 (12mm SQUARE) SERIES

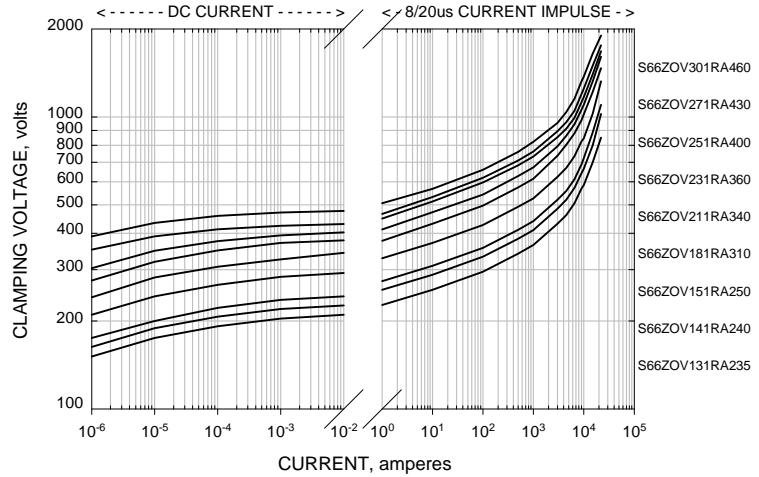

R65 (17mm SQUARE) SERIES

R66 (22mm SQUARE) SERIES

S66 (25mm SQUARE) SERIES

NOTE: For a more detailed V-I curve or for a voltage not listed on the graphs provided, please contact us.

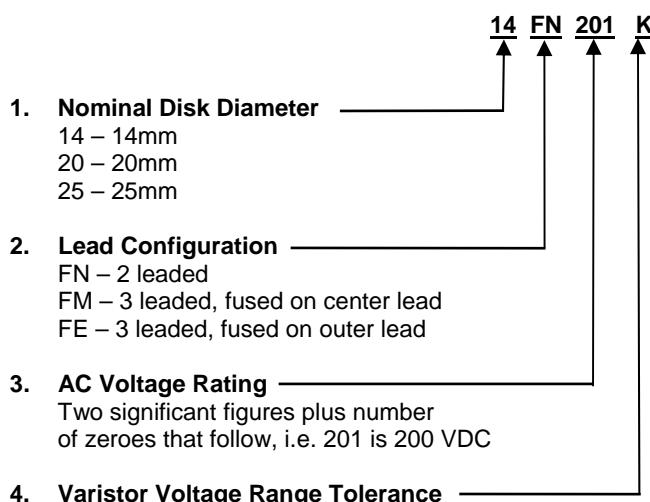

## INTRODUCTION

The Thermally Protected Series is designed for safe disconnection of the varistor from the circuit due to abnormal operating conditions. These components consist of 2 or 3 leaded wire leads, a thermal disconnect, and have nominal diameters of 14mm, 20mm, and 25mm. Voltage ranges from 60VAC-750VAC with peak surge currents of 4.5kA/6kA (14mm), 10kA (20mm), and 18kA (25mm).

## STYLE DESIGNATION

The Maida Style Number is the typical means to identify our components when ordered. The style number identifies several parameters that are important for the characteristics of the device. An alternative ordering method, if known, is by our Item Number.

The following example is the standard part numbering system when ordering our Thermally Protected Series components by the Maida Style Number:

## STANDARD MARKING

Minimum marking shall consist of an abbreviated style designation and, when space is available, the manufacturer's initials or company logo.

Example:

MDC

FV

14N201

Where:

MDC - Company Initials

FV - Fail safe Varistor

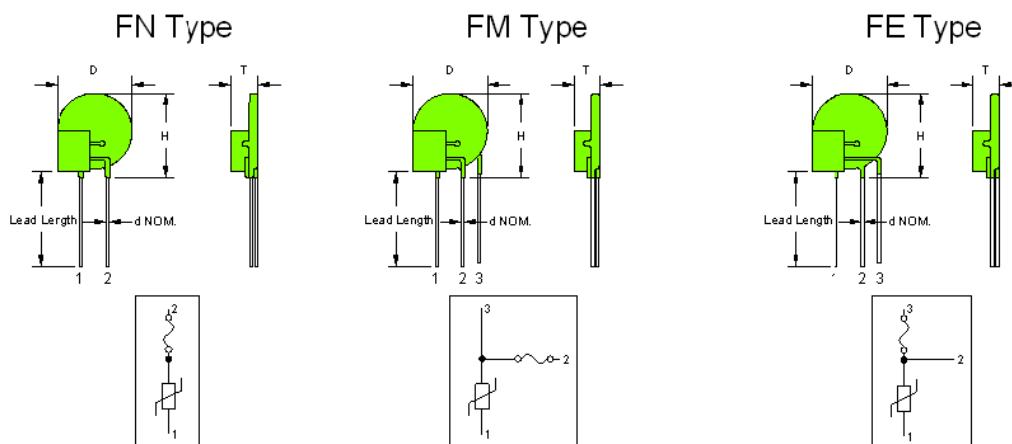

14 - Diameter

N - Series Designation (FN, FM, FE)

201 - Nominal DC Voltage Rating (200VDC)

A manufacturing date code and/or special markings are available upon request.

Other safety agency designations are included where applicable.

NOTES:

Appendix A lists the single-pulse peak current and energy ratings on file with the Safety Agencies.

Maximum transient rating specified in this table are valid. They may differ from those shown in Appendix A.

A = UL1449

D = VDE

B = cUL

E =

C = CSA

F =

#### NOTES:

Appendix A lists the single-pulse peak current and energy ratings on file with the Safety Agencies.

Maximum transient rating specified in this table are valid. They may differ from those shown in Appendix A.

A = UL1449

D = VDE

B = cUL

E =

C = CSA

F =

NOTES:

Appendix A lists the single-pulse peak current and energy ratings on file with the Safety Agencies.

Maximum transient rating specified in this table are valid. They may differ from those shown in Appendix A.

A = UL1449

D = VDE

B = cUL

E =

C = CSA

F =

NOTES:

Appendix A lists the single-pulse peak current and energy ratings on file with the Safety Agencies.

Maximum transient rating specified in this table are valid. They may differ from those shown in Appendix A.

A = UL1449

D = VDE

B = cUL

E =

C = CSA

F =

# THERMALLY PROTECTED HIGH ENERGY (TPHE) SERIES

## INTRODUCTION

The Thermally Protected High Energy, TPHE, Series is designed for safe disconnection of the Varistor from the circuit due to abnormal operating conditions. The TPHE Series is designed to withstand the rigors of UL1449 4<sup>th</sup> Edition Type 1 and Type 2 applications while still meeting the requirements of typical High Energy Varistor applications.

The FSS design is for new and existing applications requiring high current surge capabilities, with integrated thermal protection accommodating form, and fit allowing for a drop in replacement for existing product offerings.

The FSD design is also for new and existing applications. It is packaged in a DIN-RAIL mounting configuration. The FSD design is available with 1, 2, 3, and 4 pole configurations for Delta and Wye connections.

The FSP design is similar to the FSS. It utilizes a smaller package to accommodate lower profile applications.

Current ranges:  $I_N$  – (10kA, and 20kA)  
 $I_{MAX}$  – (25kA, and 50kA)

## STYLE DESIGNATION

The Maida Style Number is the typical means to identify our components when ordered. The style number identifies several parameters that are important for the characteristics of the device. An alternative ordering method, if known, is by our Item Number.

The following example is the standard part numbering system when ordering our Thermally Protected Series components by the Maida Style Number:

FSS ZOV 151 R

1. Nominal Disk Diameter  
FSD – 34mm Square DIN-RAIL  
FSS – 34mm Square  
FSP – 25mm Square
2. Material  
ZOV – Zinc Oxide Varistor
3. AC Voltage Rating  
Two significant figures plus number of zeroes that follow, i.e. 151 is 150 VAC
4. Special Instructions  
R is standard

## STANDARD MARKING

Minimum marking shall consist of an abbreviated style designation and, when space is available, the manufacturer's initials or company logo.

Example:

MDC

FSS

151

Where:

MDC – Company initials/Logo

FS - Fail Safe

S - 34 mm

151 - AC Voltage Rating (150VAC)

A manufacturing date code and/or special markings are available upon request. Other safety agency designations are included where applicable.

# HIGH ENERGY SERIES

## INTRODUCTION

The High Energy Series is our large tab-leaded and wire-leaded varistors. They are available in round and square shapes. These varistors are available in 25mm, 32mm, 34mm, 40mm, and 53mm configurations including single and dual discs. They are available with maximum continuous operating voltages (MCOV) ranging from 130VAC to 1000VAC (up to 1500VAC upon request).

The High Energy Series is designed for pulse repetition and/or very large surge current environments. Numerous tab forms are available for all sizes.

## STYLE DESIGNATION

The Maida Style Number is the typical means to identify our components when ordered. The style number identifies several parameters that are important for the characteristics of the device. An alternative ordering method, if known, is by our Item Number.

The following example is the standard part numbering system when ordering our High Energy Series components by the Maida Style Number:

- D 78 80 ZOV 131 RA 210
- Coating Designation**  
D – Standard Epoxy Coating  
P – Phenolic Coating  
S – Square Disc Epoxy Coating  
PS – Square Disc Phenolic Coating  
Neither – Denote no conformal coating.
  - Nominal Disk Diameter**  
S66 – 25mm Square  
78 – 32mm  
S75 – 34mm Square  
75 – 40mm  
77 – 53mm
  - Lead Configuration**  
(Refer to lead codes)
  - Material Identifier**  
Zinc Oxide Varistor
  - AC Voltage Rating**  
Two significant figures plus number of zeroes that follow, i.e. 131 is 130 VAC
  - Special Instructions**, RA is standard
  - Rating Code**, up to four numbers

## STANDARD MARKING

Minimum marking shall consist of an abbreviated style designation and, when space is available, the manufacturer's initials or company logo.

Example

MDC

Z131

210UL

Where:

MDC - Company Initials

Z - Zinc Oxide Varistor

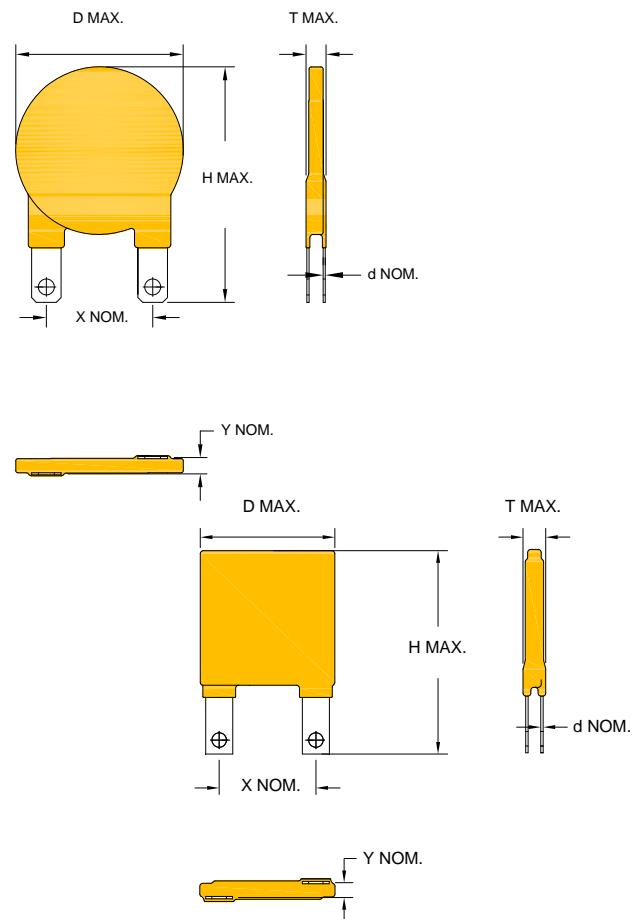

131 - AC Voltage rating (130VAC)

210 - Rating code

UL - UL recognition, if applicable

A manufacturing date code and/or special markings are available upon request.

Other safety agency designations are included where applicable.

# HIGH ENERGY SERIES

## SPECIFICATIONS

### 130VAC thru 320VAC VARISTORS

#### NOTES:

Appendix A lists the single-pulse peak current and energy ratings on file with the Safety Agencies.

Maximum transient rating specified in this table are valid. They may differ from those shown in Appendix A.

A = UL1449      D = VDE

B = cUL      E =

C = CSA      F =

#### NOTES:

Appendix A lists the single-pulse peak current and energy ratings on file with the Safety Agencies.

Maximum transient rating specified in this table are valid. They may differ from those shown in Appendix A.

A = UL1449      D = VDE

B = cUL      E =

C = CSA      F =

NOTE: Alternate dimensional specifications, including lead styles, for any part listed may be available upon request. Please contact us for any inquiries.

# HIGH ENERGY SERIES LEAD CODES

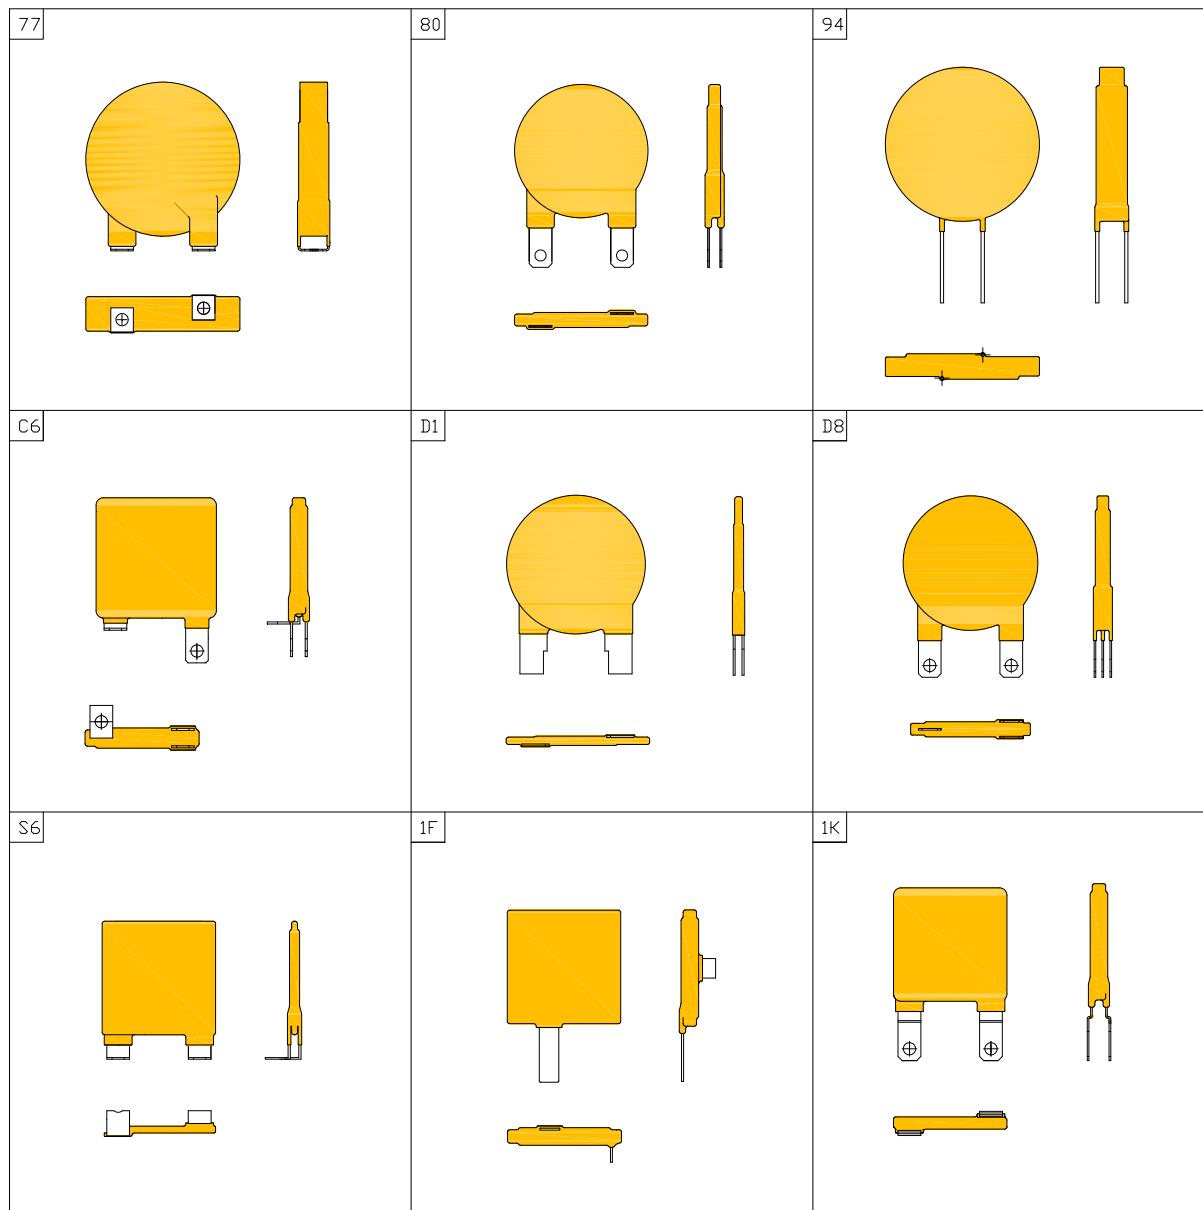

## LEAD CODES

The Maida Development Company prides itself on its ability to manufacture tab leaded devices to meet almost every request of its customers. The following table depicts common varieties of leads that are presently supplied. It should be noted that the dimensions (such as the X, height, tab lead length, epoxy "pant leg", tab configurations, etc.) can be modified on any the items shown to meet almost any request. Maida is also capable of supplying the various tab lead forms in either right-hand or left-hand configurations.

For any inquiries regarding specific lead forms please contact us.

NOTE: Any tab lead configuration can be obtained on either round or square varistors.

# ENCAPSULATED MOV SERIES

## INTRODUCTION

The Encapsulated MOV Series is ideal for SMT processing and Pick and Place assembly. Its low profile package offers space savings compared to leaded devices. These encapsulated components can withstand higher surge energies (up to 1200A) than MLVs. They are available in standard EIA sizes of 2825 and 4032 packages. The construction is RoHS compliant and the coating is UL94-V0 rated. They are available with maximum continuous operating voltages (MCOV) ranging from 11VAC to 680VAC.

## STYLE DESIGNATION

The Maida Style Number is the typical means to identify our components when ordered. The style number identifies several parameters that are important for the characteristics of the device. An alternative ordering method, if known, is by our Item Number.

The following example is the standard part numbering system when ordering our Encapsulated MOV Series components by the Maida Style Number:

- 4S 2N ZOV 131 RA 14
1. **Package Description** \_\_\_\_\_  
2S – 2825  
4S – 4032
  2. **Lead Configuration** \_\_\_\_\_  
2N – J Lead  
2P – L Lead
  4. **Material Identifier** \_\_\_\_\_  
Zinc Oxide Varistor
  5. **AC Voltage Rating** \_\_\_\_\_  
Two significant figures plus number of zeroes that follow, i.e. 131 is 130 VAC
  6. **Special Instructions**, RA is standard \_\_\_\_\_
  7. **Rating Code**, up to 2 numbers \_\_\_\_\_

## STANDARD MARKING

Minimum marking shall consist of an abbreviated style designation and, when space is available, the manufacturer's initials or company logo.

Example

MDC  
4S131UL

Where:

MDC - Company Initials

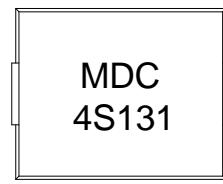

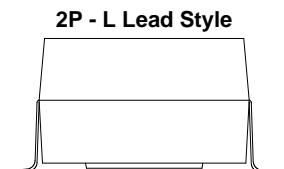

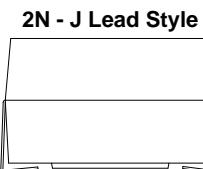

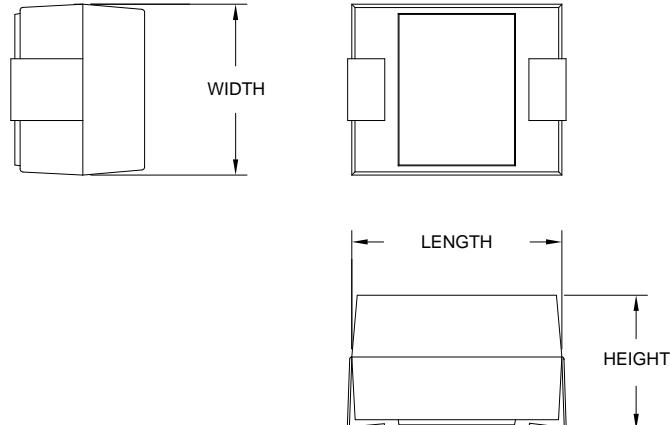

4S - Package Description

131 - AC Voltage rating (130VAC)

UL - UL recognition, if applicable

A manufacturing date code and/or special markings may be available upon request.

Other safety agency designations are included where applicable.

## INTRODUCTION

The SMT Series, designed for surface mount applications, are small varistors manufactured in a leadless monoblock form. The SMT Series varistors have significantly lower profiles than our radial-leaded devices, thus reducing PC board design requirements. They are available with maximum continuous operating voltages (MCOV) ranging from 10VAC to 600VAC.

SMT Series are typically packaged in Tape and Reel packaging. To order in an alternate packaging scheme, please see the order code below or contact us.

## STYLE DESIGNATION

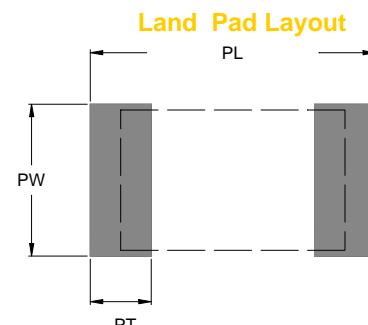

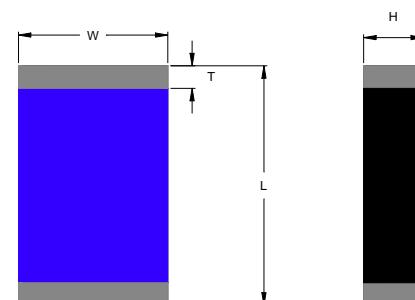

The Maida Style Number is the typical means to identify our components when ordered. The style number identifies several parameters that are important for the characteristics of the device. An alternative ordering method, if known, is by our Item Number.

The following example is the standard part numbering system when ordering our SMT Series components by the Maida Style Number:

- 1. **Package Description** \_\_\_\_\_  
8 – Rectangular Block
- 2. **Size Designation** \_\_\_\_\_  
S – 0.320" x 0.200" (3220)
- 4. **Configuration** \_\_\_\_\_  
17 – No leads
- 5. **Part Identifier** \_\_\_\_\_  
SM – Surface Mount
- 6. **AC Voltage Rating** \_\_\_\_\_  
Two significant figures plus number of zeroes that follow, i.e. 131 is 130 VAC
- 7. **Packaging Code** \_\_\_\_\_  
T6 – Tape and Reel  
B – Bulk

## STANDARD MARKING

The SMT Series currently do not have markings. Special marking may be available upon request.

# SMV SERIES

## INTRODUCTION

The MLV Series, designed for surface mount applications, are small multilayer varistors. They are available in standard EIA sizes of 0402, 0603, 0805, 1206, 1210, 1812 and 2220 packages. The MLV Series have 5 different sub-series:

**EV Series** - This is our lowest capacitance MLV series. Typically these are used in ESD and data line protection.

**SV Series** – This is our standard MLV series. They provide good high current pulse protection with moderate capacitance.

**TV Series** – This is our low capacitance MLV series, similar to the SV Series. This series should be selected when the SV series capacitance is too high.

**PV Series** – This is our power MLV series. They can protect against higher surge currents than the SV Series.

**AV Series** – This is our array series. They are designed for multiple I/O connections in a single package.

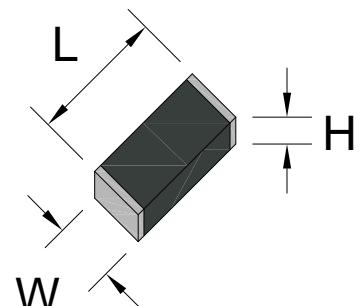

The MLV Series of varistors are designed to provide transient, surge, and ESD (Electrostatic Discharge) protection for a wide variety of applications.

## STYLE DESIGNATION

The Maida Style Number is the typical means to identify our components when ordered. The style number identifies several parameters that are important for the characteristics of the device. An alternative ordering method, if known, is by our Item Number.

The following example is the standard part numbering system when ordering our MLV Series components by the Maida Style Number:

- EV 18 N 0603 L 120 R
1. Series Designation
  2. DC Voltage Rating (VDC)
  3. End Termination Type  
N – Tin (Sn) plated Nickel (Ni)
  4. Chip size  
As defined by EIA standards
  5. Special Capacitance Designation  
L – Low Capacitance
  6. Nominal Capacitance (pF)  
Two significant figures plus number of zeroes that follow, i.e. 120 is 12 pF
  7. Packaging Code  
B – Bulk  
R – Tape & Reel

## EV SERIES for ESD PROTECTION

Level 4 ESD protection to 8kV direct, 15kV air discharge

## INTRODUCTION

The MPD Series is a modular surge protective device, featuring an IP65 enclosure rating, and is used for transient overvoltage protection. The MPD Series utilizes thermal protection in conjunction with metal oxide varistors to provide a protection package for use in many applications such as commercial and residential indoor/outdoor LED lighting fixtures. The MPD Series can be connected in series or parallel, is RoHS compliant, and has a LED operational indicator. The MPD Series is available with a 277VAC MCOV.

### KEY FEATURES

- UL1449 - Type 4CA
- Thermally Protected
- Series/Parallel Connectivity
- Operational indicator
- In: 10kA, Imax: 20kA (@ 8/20us)
- IP65 enclosure rating

### TYPICAL APPLICATIONS

- LED Street Lighting
- Traffic Lighting
- Roadway Lighting
- Parking/Garage Lighting
- Indoor/Outdoor LED Lighting Fixture
- AC Power Systems requiring thermal protection
- Digital Signs

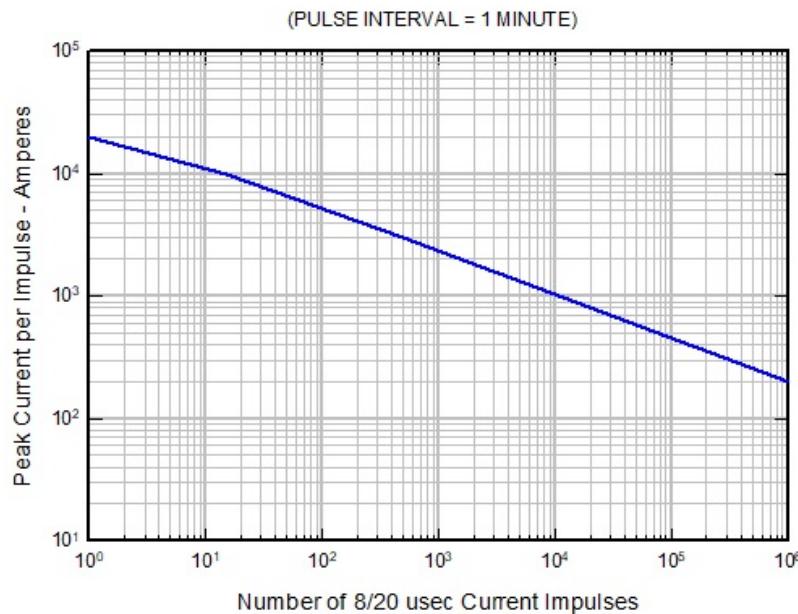

### SAFETY AGENCY APPROVALS

- UL1449 (E321173)
- cUL (E321173)

## SPECIFICATIONS

PULSE REPETITION RATINGS FOR 8/20usec CURRENT WAVEFORM  
MAXIMUM PEAK CURRENT PER PULSE vs. NUMBER OF IMPULSES

## STYLE DESIGNATION

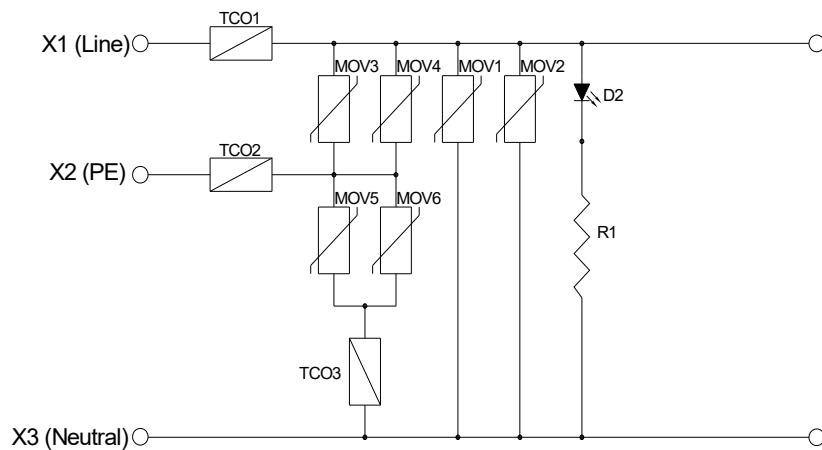

The Maida Style Number is the typical means to identify our devices when ordered. The style number identifies several parameters that are important for the characteristics of the device. An alternative ordering method, if known, is by our Item Number.

The following example is the standard part numbering system when ordering our MPD Series components by the Maida Style Number:

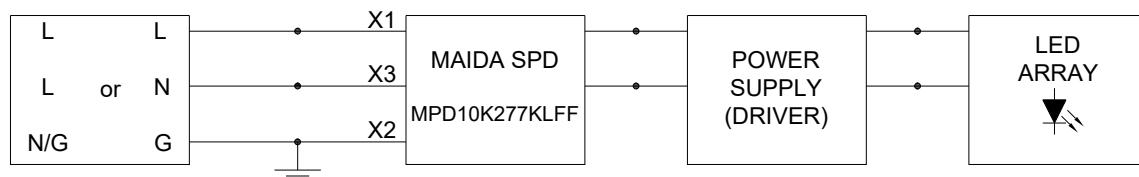

## SCHEMATIC
